## TXU Energy offering free in-home energy audits

by *PegNews wire*

**An in-home energy audit is the first step to assess how much energy your home consumes, and to evaluate what measures you can take to make your home more energy efficient.**

DALLAS — In order to help North Texans make their homes more energy efficient, [TXU Energy](#) has partnered with [Efficient Attic Systems \(EAS\)](#) to provide customers with energy efficiency products and services.

TXU Energy is offering a free in-home energy audit to qualified homeowners, which will be provided by EAS. An in-home energy audit is the first step to assess how much energy your home consumes, and to evaluate what measures you can take to make your home more energy efficient. An in-home energy audit will show you problems that may, when corrected, save you significant amounts of money over time. During the in-home energy audit, you can pinpoint where your house is losing energy. In-home energy audits also determine the efficiency of your home's heating and cooling systems.

Qualified homeowners will have a trained EAS energy efficient specialist come to their home to conduct an hour-long visual assessment of the home's specific needs. Once this information is gathered, the specialist will walk the homeowner through various recommendations for making the home more comfortable and more energy efficient.

"Partnering with EAS provides our consumers the opportunity to save on their energy costs," said Jim Burke, CEO of TXU Energy. "Consumers who call EAS and qualify for a free in-home energy audit can use the audit results, highlighting potential energy usage improvements that could, if implemented, save them up to 20% off their electric usage."

EAS is a Texas-based company that provides homeowners with energy efficiency advice and services to help use energy more efficiently to save money on electric bills and to make a home more comfortable.

*Presumably the company performing the audit will make recommendations that include services it sells.*
